## Motor controllers CMMO-ST

Key features

### At a glance

- The motor controller CMMO-ST is a closed-loop and open-loop position controller
  - Separate load and logic supply
  - Supports the safety function "safe torque off" (STO)
  - Easy actuation via:
    - I/O interface
    - IO-Link or I-Port
    - Modbus TCP
  - Monitoring of freely defined positions and torque ranges
  - Backup file enables seamless device replacement
  - H-rail mounting possible
  - Encoder option (closed loop), in other words no step losses, following errors are corrected
- Parameterisation possible via:
- Configuration package FCT (Festo Configuration Tool)
  - Ethernet interface with integrated web server

### Communication system IO-Link

#### IO-Link

IO-Link is a standardised I/O technology (IEC 61131-9) which enables communication with sensors and actuators.

This is a form of point-to-point communication.

The data profile FHPP is transmitted via the physical interface.

### Specific I-Port interface from Festo

The I-Port interface is based on IO-Link technology and enables communication with sensors and actuators.

The advantage is that the connected devices are automatically detected by Festo (Plug and Work).

The data profile FHPP is transmitted via the physical interface.

### Communication system Modbus TCP

#### Modbus

Modbus TCP is an open communication protocol (IEC 61158) based on the master-slave architecture. It is an established standard for communication via Ethernet-TCP/IP in automation technology.

The data profile FHPP is transmitted via the physical interface.

### Description of the interfaces

With I/O interface

- 1 7-segment display
- 2 Ethernet interface (RJ45)
- 3 I/O interface
- 4 Voltage supply

With IO-Link interface

- 5 Reference switch
- 6 STO safety function
- 7 Encoder
- 8 Motor

- 9 IO-Link interface
- 10 Fastening bracket for mounting on an H-rail
- 11 Status of IO-Link connection

Key features

## System overview

Fieldbus modules CTEU serve as an interface between the PLC controller and the motor controller CMMO-ST. This is then integrated into the control systems of various manufacturers using different bus nodes.

The following protocols are supported using the appropriate module:

- CANopen
- DeviceNet
- EtherCAT
- PROFIBUS
- PROFINET

For actuating:  
 Electric cylinder EPCO  
 Toothed belt axis ELGR  
 Rotary drive ERMO  
 Stepper motor EMMS-ST

Software platform for electric drives from Festo

- All drives in a system can be managed and saved in a common project
- Project and data management for all supported device types
- Easy to use thanks to graphically supported parameter entry
- Universal mode of operation for all drives
- Work offline at your desk or online at the machine

### Mechanical reference positions and limit positions

- Reference positions can be either edited or taught in
- Flexible adaptation to installation conditions
- Settings are displayed clearly

### Position set table

- Up to 64 position sets ensure flexibility in positioning
- Absolute or relative positioning values can be used
- The following parameters can be set flexibly for each application:
  - Position
  - Speed
  - Acceleration
  - Braking ramps
- Force control
- Complete function test
