Key features

### Solenoid valves VUVS

In-line valve VUVS-LK as individual valve

In-line valves are designed to be used without pneumatic linking. All pneumatic connections are on the valve and can be equipped with fittings/tubing.

By using a special seal set, the in-line valves can also be mounted on a manifold rail (pneumatic linking) as semi in-line valves.

### Equipment options

VUVS-LK

- 3/2- and 5/2-way valves, with solenoid coil
- Size 20 (21 mm)
- Size 25 (26.5 mm)

VUVS-L

- 3/2-, 5/2- and 5/3-way valves, with or without solenoid coil
- Size 20 (21 mm), size 25 (26.5 mm) and size 30 (31 mm)

The operating voltage of VUVS-L valves can be varied by changing the solenoid coil on the armature guide tube.

Valve functions of VUVS-LK

3/2-way valve, normally open, single solenoid:

- Internal pilot air supply
- Reset via pneumatic spring
- Direction of flow not reversible

5/2-way valve, single solenoid:

### Key features

- A maximum of 16 valve positions can be configured in the standard version (for VUVS-L variant only)
- A maximum of 12 valve positions can be configured in the compact version (maximum of 10 valve positions for VUVS-LK variant)

- Valve positions 2 ... 10 can be configured in increments of 1, valve positions 10 ... 16 in increments of 2

- Manifold block with a maximum of 10 valve positions
- Extension module with 2 valve positions
- Common supply manifold with a maximum of 10 valve positions

- Creation of pressure zones (maximum 9 pressure zones in the case of a valve manifold with 16 valve positions)

### Design

#### Valve replacement

Each valve is attached to the manifold block using two screws. The appropriate seal is mounted on the valve.

This means that the valves can be easily replaced.

#### Extension

Valve positions covered with blanking plates can be replaced with valves at a later date. The dimensions, mounting points and existing pneumatic installations remain unchanged.

Extension modules with two valve positions are available for the standard manifold block. A manifold block can be extended with a maximum of three extension modules.

## Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold block/common supply manifold and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUS.

A pressure zone is created by isolating the internal ducts between the valve positions using an appropriate separator.

The separator can be used in the following ducts:

- Duct 1
- Duct 3
- Duct 5

Note

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/supply for each pressure zone
- Pressure zone separation is not possible in ducts 12 and 14 (pilot air supply)

## Duct separation

	Description
	<p>The pressure zones can be freely configured with the VTUS. The following duct separations are possible:</p> <ul style="list-style-type: none"><li>• Duct 1 closed</li><li>• Duct 1/3/5 closed</li><li>• Duct 3/5 closed</li></ul>
	<p>The number of pressure zones with the VTUS is limited by the number of valve positions on the manifold block/common supply manifold. Note that each supply plate occupies one valve position. There must always be at least two valve positions between two separators. In the case of a maximum extension of 16 valve positions, a maximum of 9 pressure zones can be created.</p>

## Mounting valve manifold VTUS

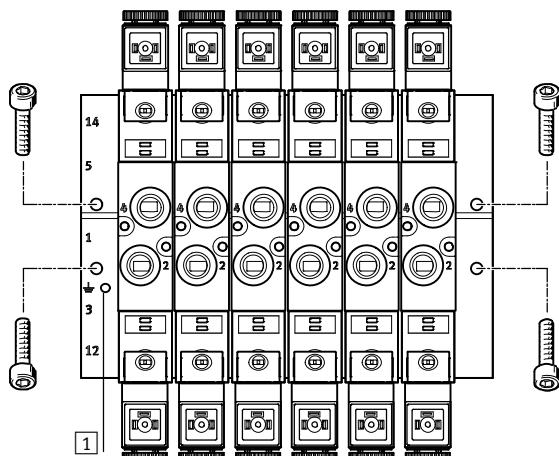

Sturdy manifold assembly owing to:

- Four through-holes for wall mounting
- H-rail mounting

- - Note

Use the thread M4/M5 provided on the manifold block for earthing the valve manifold.

### Wall mounting

Sturdy wall mounting of the manifold block using four through-holes.

[1] Earth terminal

### H-rail mounting

The H-rail mounting VAME-T-M... consists of two mounting clips. These are screwed to the manifold block on the left and right.

The valve manifold VTUS is then lowered onto the H-rail from above (arrow A) and clipped into the H-rail at the bottom (arrow B).

- - Note

- Note the max. tightening torque of the screws for H-rail mounting
- Only horizontal H-rail mounting is permissible
- Mounting only possible on H-rail TH 35... to EN 60715
- Vibration/shock loads are not permissible with H-rail mounting
- Further information on assembly → Assembly instructions for H-rail mounting VAME-T-M...
