Key features – Pneumatics

FESTO

## Innovative

- A reliable, heavy-duty valve with a long service life
- Flow rate up to 2300 l/min
- Low-cost universal valve with no performance limitations
- Wide range of valve functions
- Several sizes

## Versatile

- In-line valves can be used as individual valves or manifold valves
- Variable pressure zones
- Wide range of mounting options

## Reliable

- Ergonomic, reliable operation
- Durable thanks to tried and tested piston spools
- Reliable servicing thanks to valves that can be replaced quickly and easily

## Easy to install

- Pre-assembled units on rails
- Individual valves assembled ready for installation
- Supply manifolds for mounting on both sides
- Secure mounting on wall or H-rail

## Valve manifold selection

### Configurator

The appropriate valve manifold VTUS can be chosen quickly and easily using the online catalogue. This includes a convenient configurator, making it much easier to order the right product.

The valve manifold is fully assembled according to your order specification and individually checked. This reduces assembly and installation time to a minimum.

## Equipment options

- Size 20 (21 mm)
- Size 25 (26.5 mm)
- Size 30 (31 mm)
- 3/2-, 5/2- and 5/3-way valves
- In-line valves

All valves are equipped with a piston spool and patented sealing system to facilitate efficient sealing, a broad pressure range and a long service life. Pneumatic valves VUWS have a sturdy design that enables them to be used in harsh environments.

Pneumatic valves VUWS are extremely well suited for controlling cylinders or compressed air networks for easy clamping and locking processes in semi-automatic assembly and manufacturing.

## Valve functions

- 3/2-way valve, normal position open, monostable:  
• Reset via pneumatic/mechanical spring  
• Direction of flow reversible when reset is via mechanical spring  
• Dual-pressure operation possible

- 3/2-way valve, normal position closed, monostable:  
• Reset via pneumatic/mechanical spring  
• Direction of flow reversible when reset is via mechanical spring  
• Dual-pressure operation possible

- 5/2-way valve, monostable:  
• Reset via pneumatic/mechanical spring  
• Direction of flow reversible when reset is via mechanical spring  
5/2-way valve, bistable:  
• Direction of flow reversible

- 5/3-way valve, mid-position exhausted, pressurised or closed:  
• External pneumatic spring connection  
• Direction of flow reversible  
• Reset via mechanical spring

## Key features

- A maximum of 16 valve positions can be configured in the standard version
- A maximum of 12 valve positions can be configured in the compact version

- Valve positions 2 ... 10 can be configured in increments of 1, valve positions 10 ... 16 in increments of 2
- Manifold block with a maximum of 10 valve positions

- Supply manifold with a maximum of 10 valve positions

- Creation of pressure zones (maximum 9 pressure zones in the case of a valve manifold with 16 valve positions)

## Design

### Valve replacement

Each valve is attached to the manifold block using two screws. The appropriate seal is mounted on the valve.

This means that the valves can be easily replaced.

### Extension

Valve positions covered with blanking plates can be replaced with valves at a later date.

The dimensions, mounting points and existing pneumatic installations remain unchanged.

## Blanking plate for unused valve position

For covering unused valve positions

## Supply plate

For additional air supply and exhaust via a valve position

## Separator for pressure zones

For creating pressure zones  
(maximum 9 pressure zones permitted)

## Note

A filter must be installed upstream of valves operated in vacuum mode.  
This prevents any foreign matter in

the intake air getting into the valve  
(e.g. when operating a suction cup).

Key features – Pneumatics

## Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold block/supply manifold and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUS.

A pressure zone is created by isolating the internal ducts between the valve positions by means of an appropriate separator.

The separator can be used in the following ducts:

- Duct 1
- Duct 3
- Duct 5

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/supply for each pressure zone

## Duct separation

Duct separation	Description
	<p>The pressure zones can be freely configured with the VTUS. The following duct separations are possible:</p> <ul style="list-style-type: none"> <li>• Duct 1 closed</li> <li>• Duct 1/3/5 closed</li> <li>• Duct 3/5 closed</li> </ul>
	<p>The number of pressure zones with the VTUS is limited by the number of valve positions on the manifold block/supply manifold. Note that each supply plate occupies one valve position. There must always be at least 2 valve positions between 2 separators. In the case of a maximum extension of 16 valve positions, a maximum of 9 pressure zones can be created.</p>

Key features – Assembly

## Mounting the valve manifold

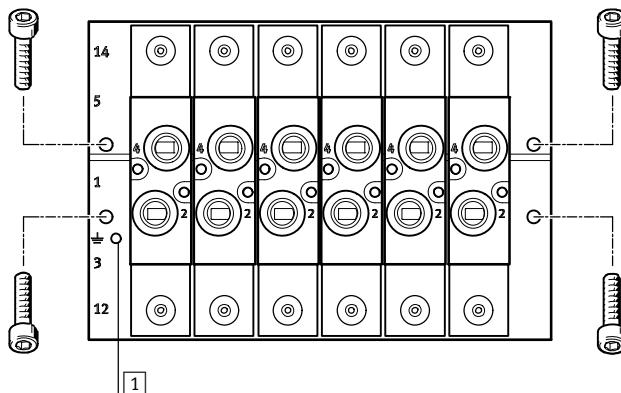

Sturdy manifold assembly owing to:

- Four through-holes for wall mounting
- H-rail mounting

Note  
Use the thread M4 (M5 for size 30) provided on the manifold block for earthing the valve manifold.

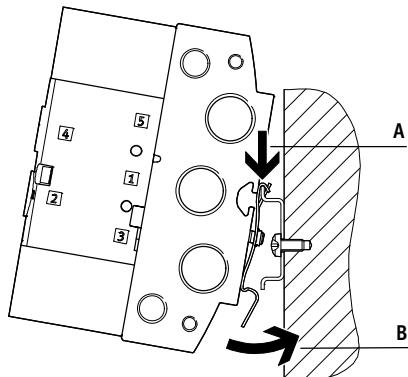

### Wall mounting

Sturdy wall mounting of the manifold block using four through-holes.

1 Earth terminal

### H-rail mounting

The H-rail mounting VAME-T-M... consists of two mounting clips. These are screwed to the manifold block on the left and right.

The prepared manifold block is then lowered onto the H-rail from above (arrow A) and clipped into the H-rail at the bottom (arrow B).

Note  
• Note the max. tightening torque of the screws for H-rail mounting.  
• Only horizontal H-rail mounting is permissible.  
• Mounting only possible on H-rail TH 35... to EN 60715.  
• Vibration/shock loads are not permissible with H-rail mounting.  
• Further information on assembly

## Mounting individual valve VUWS

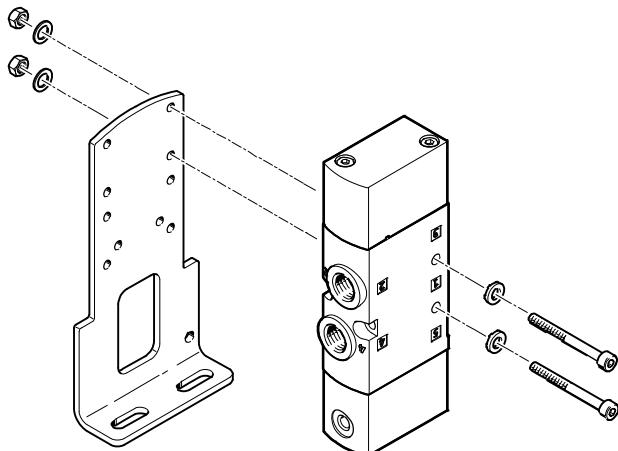

Wall mounting

For mounting individual valves on a flat surface, e.g. aluminium profile systems.  
The pneumatic valves are provided with two through-holes for attaching to the wall mounting  
VAME-B10-20-W.

The screw set required is included with the wall mounting VAME-B10-20-W.  
The wall mounting VAME-B10-20-W can be used for sizes 20, 25 and 30.

Foot mounting

For mounting individual valves on a flat surface, e.g. aluminium profile systems.  
The pneumatic valves are provided with two through-holes for attaching to the foot mounting  
VAME-B10-...-A.

The screw set required is included with the foot mounting VAME-B10-...-A.

## Information on materials

Housing	Die-cast aluminium
Piston spool	Wrought aluminium alloy (P53 types: high-alloy stainless steel)
Seals	HNBR, NBR
Note on materials	RoHS compliant

## Special features of pneumatic 3/2-way valves

Reset: mechanical spring

Internal pneumatic spring

- Faster switch-off time
- In the case of dual-pressure operation, the higher pressure must always be present at port 1
- Pressure on port 2 not permitted
